

THE ESSENTIALS

From cell lysis to standardisation product

- Fully adapted to cell samples
- Must-have for your lab
- Keep your target safe

THE ESSENTIALS

HOMOGENISATION & STANDARDISATION PRODUCTS

We all know that the **preparation of the biological samples** is a crucial step in the analysis process.

The quality of the matrix to be assayed is of utmost importance.

Whatever the origin of the sample (cell, tissue, bone), it absolutely needs to be homogenised before stabilisation and quantification.

Here are **The Essentials** to achieve your experiments with affordable and efficient products.

STANDARDISATION PRODUCTS

- | | |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| <ul style="list-style-type: none">● BCA Protein Quantitation Assay
Total protein concentration
Incubation time <1 hour | Cat No: D05077 |
| <ul style="list-style-type: none">● Bradford Protein Quantitation Assay
Total protein concentration
Incubation time <1 hour | Cat No: D05078 |
| <ul style="list-style-type: none">● Creatinine (urinary) Colorimetric Assay Kit
Creatine levels in urine
Incubation time <1 hour | Cat No: 500701 |
| <ul style="list-style-type: none">● Creatinine (serum) Colorimetric Assay Kit
Creatine levels in serum & plasma
Incubation time <1 hour | Cat No: 700460 |
| <ul style="list-style-type: none">● Protein Determination kit
Total protein concentration
Incubation time <1 hour | Cat No: 704002 |
